Table of contents

1. Introduction

2. Preliminaries

- Path planning problem
- Classic A* theoretical description
- Differentiable A* theoretical description
- Neural Network theoretical description
- Training setup desctiption

3. Implementation (code presentation with visual results)

- Classic A*
- Differentiable A*
- Neural Network
- Training Setup

4. Description of the model training process

5. Results

- Presentation of the resulting guidance maps
- Comparison with the regular A*
- Visualization of the results

6. Description of development tools used in the project [?]

- Docker [devcontainers]
- Git

7. Conclusion

- Model evaluation
- Possible applications
- Further development
